

Your Benefits

- + substantially reduce the amount of contaminants on a fire hose
- + intuitive and easy operation
- + battery-operated
- + single operator use
- + highly portable and mobile

The need to clean ...

In recent years fire service cancer mitigation efforts have evolved from a near singular focus on the need for advanced cleaning of PPE.

The current approach has expanded to include emphasis on the need to perform on-scene gross decon, Preliminary Exposure Reduction, of personnel, PPE, equipment, and now attack HOSE-LINE prior to departing the fire-ground.

... and our solution ...

the BARTH Clean Getaway Portable On-Scene Hose Cleaner. The Clean Getaway is designed and engineered to simply, efficiently and effectively clean hose-line BEFORE restoring the apparatus and departing the scene. The Clean Getaway eliminates needless exposure of firefighters to carcinogens and the unnecessary extra work associated with hose cleaning in the past.

The cleaning efficacy of the HOSE CLEANER has been verified through multiple studies done in consultation and cooperation with textile experts at North Carolina State University.

... with excellent features.

The deep clean process is accomplished by the two specially designed brushes with long cleaning bristles. After the hose is loaded into the washing canal the long bristles catch the coupling and the hose is pulled through the machine by the brushes automatically. So only one person is necessary to comfortably and effectively operate the machine.

Technical Specifications

Product Code	156911
Battery runtime	> 60 min
Electrical power supply	28V / MILWAUKEE battery
Water pressure	4 -7,5 bar (60-110 psi)
Water supply	25 mm or 1 ½" NST-coupling
Dimension	580 x 550 x 330 mm
Weight	30 kg (66 lb)
