HIGHLY RESISTANT TO CHEMICALS

You are using footwear to protect against chemical risks. This product has been assessed according to EN 13832-3.

The footwear has been tested with different chemicals as given in the table below.

The protection has been assessed under laboratory conditions and can only be guaranteed for the chemicals given.

The wearer should be aware that in case of contact with other chemicals or with physical stresses (high temperature, abrasion for example), the protection given by the footwear may be adversely affected and necessary precautions should be taken.

Product	CHIMIE SA / CHIMIE NS		
Standard	EN 13832-3		
Chemical	Sodium hydroxide (K)	Ammonia Solution (O)	Hydrogen peroxide (P)
CAS N°	1310-73-2	1336-21-6	124-43-6

CHIMIE SA (toe cap + anti-perforation midsole)

ISO EN20345 : 2011 SS HRC CR AN SRC

- ① Safety toe cap : impact resistance 200 J, compression resistance 1500 daN
- ② Anti-perforation midsole (110 daN)
- ③ Heel energy absorption (20 joules)
- ④ Antistatic (see enclosed)
- ⑤ Contact heat resistance (HRC) 1 minute at 300°C
- ⑥ Cut resistant (CR)
- ⑦ Ankle protection (AN)
- ⑧ Sole slip resistance (SRC) according to EN ISO 20345 : 2011 :

Surface	Lubricant	Position	
		Flat	Heel
Ceramic	Detergent	0,32	0,28
Steel	Glycerine	0,18	0,13

ANTISTATISME

In use, no insulating elements are present. Experience has shown that, for antistatic purposes, the discharge path through a product should normally have an electrical resistance of less than 1000 MΩ at any time throughout its useful life. A value of 100 kΩ is specified as the lowest limit of resistance of a product when it's new. If any insert is put between the inner sole and the foot, in order to ensure some limited protection against dangerous electric shock or ignition in the event of any electrical apparatus becoming defective when operating at voltages of up to 250 V. However, under certain conditions, users should be aware that if it is necessary to minimize the risk of electric shock or ignition, thus provisions to protect the wearer avoiding the risk of spark ignition, should be taken at all times.

Antistatic footwear should be stored, users should be aware that if it is necessary to minimize the risk of electric shock or ignition, thus provisions to protect the wearer avoiding the risk of spark ignition, should be taken at all times. The electrical resistance of this type of footwear can be changed significantly by flexing, contamination or moisture. This footwear will not perform its intended function if worn in wet conditions. It is therefore necessary to ensure that the product is capable of fulfilling its designed function of dissipating electrostatic charges and also of giving some protection during the whole of its life. The user is recommended to establish an in-house test for electrical resistance and use it at protection against regular and frequent intervals.

It should be noted, however, that antistatic footwear cannot guarantee adequate protection during the whole of its life. The user is recommended to establish an in-house test for electrical resistance and use it at protection against regular and frequent intervals. If the footwear is worn in conditions where the soiling material becomes contaminated, wearers should always check the electrical properties of the footwear before entering a hazard area.

If the risk of electric shock has not been completely eliminated, additional measures to avoid this risk are essential. Such measures should be such that it does not mention below, should be taken to invalidate the protection provided by the footwear part of the accident prevention program at the workplace.

CHIMIE NS (anti-perforation midsole only)

ISO EN20347 : 2012 SS HRC FO AN SRC

- ① Anti-perforation midsole (110 daN)
- ② Contact heat resistance (HRC) 1 minute at 300°C
- ③ Heel energy absorption (20 joules)
- ④ Antistatic (see enclosed)
- ⑤ Outsole resistant to fuel oil (FO)
- ⑥ Ankle protection (AN)
- ⑦ Sole slip resistance (SRC) according to EN ISO 20347 : 2012 :

Surface	Lubricant	Position	
		Flat	Heel
Ceramic	Detergent	0,32	0,28
Steel	Glycerine	0,18	0,13

INSOLE :

Testing has been carried out without insole. If insoles are added inside the boot, safety properties of the footwear can be affected.

CE MARKING :

Ce type examination carried out at CTC, (4, rue Hermann Frenkel 69367 Lyon Cedex 07 France) registered under N°0075.

IIIb CATEGORY III PPE CONTROL PROCEDURE CARRIED OUT BY :

AFNOR Certification, notified body N°0333, 11 rue Francis de Pressensé FR 93571 Saint Denis La Plaine Cedex France.
